## **Certify Data Systems Proves Interoperability of its Enterprise HIE Platform at IHE North America Connectathon**

**SAN JOSE, Calif. – January 17, 2012** – [Certify Data Systems, Inc.](#), a pioneering provider of Health Information Exchange (HIE) products, today announced that its Enterprise HIE Platform passed IHE profile testing at the 2012 IHE North America Connectathon, held January 9-14 in Chicago, IL. The company's Enterprise HIE Platform successfully exchanged clinical data with other healthcare IT vendors using IHE standards. More information about the Connectathon can be found at <http://www.ihe.net/Connectathon>.

[George Morris](#), vice president of engineering at Certify noted, "This is a huge testament to the interoperability of Certify's [technology](#), particularly as we received the passing rating on technology that has been deployed and is in use by hundreds of hospitals and medical practices across the U.S. We are looking forward to demonstrating our Enterprise HIE Platform at the HIMSS12 Annual Conference next month."

Certify will participate in the Interoperability Showcase at the HIMSS12 Annual Conference, February 20-24 at the Venetian Sands Expo Center in Las Vegas, NV. In addition to exhibiting in the Interoperability Showcase, Certify will exhibit in booth #5934 on the upper level of the expocenter. The company will demonstrate how its Enterprise HIE Platform is enabling hospital systems, medical practices and laboratories to achieve greater efficiencies and increase patient satisfaction through connected care.

### **About Certify Data Systems**

Certify Data Systems, Inc., is a pioneer in health information exchange (HIE) technology, and has implemented its Enterprise HIE Platform in the nation's leading hospitals and health systems. The bi-directional HIE platform provides true interoperability between disparate Electronic Health Record (EHR) systems, enabling hospitals, health systems, and their affiliated physician practices and laboratories to exchange essential health information in real-time without changing workflow. Moreover, Certify's "network approach" is easy to deploy, scale, manage and support.
